

Lennart Hardell

Dr Lennart Hardell is professor in oncology and cancer epidemiology at the University Hospital in Orebro, Sweden. Most of his research has been on risk factors for cancer such as exposure to pesticides and persistent organic pollutants. Examples of such agents are herbicides, dioxins, PCBs and brominated flame-retardants. During recent years he and his co-workers have studied use of cellular and cordless telephones and the risk for brain tumours. He works also as a consultant at the Department of Oncology at the hospital.
