

INTRODUCING CITIZENS FOR SAFE TECHNOLOGY (C4ST)

Many of you have been involved and/or interested in electromagnetic radiation through a cell tower, smart meter or Wi-Fi in schools situation in your community. Most likely, you have realized by now that despite amazing local efforts, the long term solutions to providing a safer environment for our families rest at the Provincial and Federal government level.

We're building a national organization *Citizens For Safe Technology* (C4ST).

Citizens For Safe Technology (C4ST) is a not-for-profit, volunteer-based coalition of parents, citizens and experts whose mission is to educate and inform Canadians and their policy makers about the dangers of the exposures to unsafe levels of radiation from technology and to work with all levels of government to create healthier communities for children and families from coast to coast.

[Click HERE](#) to see a sample of the studies showing the harmful effects of electromagnetic radiation

[Click HERE](#) to review appeals and resolutions from the medical and scientific community.

Our aim is to represent 1 million Canadians who are concerned about the adverse health effects of electromagnetic radiation, so we could really use your help. Please read on.

C4ST has the following goals:

1. It is critical that all levels of Government

- 1.1 *Acknowledge* that current assumptions about the safety of electromagnetic radiation (EMR) are outdated and must be *revised*.
- 1.2 Offer *protection* and *choice* for *electrosensitive* individuals and *children* who are exposed to EMR in their homes and schools.

2. Health Canada must **overhaul** its **process** for updating Safety Code 6.

- 2.1 Implement the recommendations of the *House of Commons, Standing Committee on Health 2010 Report*.
- 2.2 Provide *full disclosure* for all information regarding all studies and documents reviewed, included and excluded; funding of all participants
- 2.3 *Update* all analysis/guidelines to keep pace with the rapid acceleration of technology.

3. Industry Canada must **update** CPC-2-0-03 Radiocommunication and Broadcasting Antenna Systems.

3.1 *Eliminate exceptions* guidelines and *notify residents* of all new cell towers or antennae planned in their community.

3.2 Consultation must *include all issues* of concern to the public

3.3 Some real authority needs to rest with *local land use authorities*

There are three key ways you can help.

1. Share this information with friends and family members and encourage them to get involved. Forward this email.

2. Take the “5-steps” to protecting yourself and your family.

Click HERE to read our EMR fact-sheet and see the 5 steps to reduce your exposure

3. Volunteer to help. Donate to assist us in making Canadian health and safety a priority. Every donation helps.

Click HERE to Volunteer to help. **Click HERE** to Donate.

If you have time, there are many areas of expertise we can use.

Want to learn more before you volunteer? Head to our new site – www.c4st.org - to learn the facts about C4ST and what you can do next to get the word out.

Whether you have two minutes, two hours, or two days to spare, we have tools and actions you can plug into. We also are building “kits” to assist if you are engaged in a situation in your community. Our kit for cell towers and antennas is completed **Click HERE**. Stay tuned for kits on smart meters, Wi-Fi in schools, electrosensitivity and protecting our environment.

Canadian and International Experts have agreed to be our Advisors.

Our campaign so far...

Wendy Walks. Wendy is walking 800 kilometres from her home in Port Franks to Ottawa to raise awareness about electrosensitivity and involuntary everyday exposures to radiation that are endangering health, her grandchildren, and ecosystems. Wendy is advocating rights for children, individuals, and communities by asking for much tighter radiation emission controls and acts of social responsibility from corporations and authorities — immediately.

Click HERE to go to Wendy’s home page.

Press Coverage

We have been successful in raising awareness of the risks of EMR.
