Re: Input for public consultation on WHO Electromagnetic Fields (EMF) Radio Frequency Fields: Environmental Health Criteria (EHC-RF) Monograph Draft (2014)

Thank you for the opportunity to comment on the EHC-RF draft Monograph.

Outline of my submission:

1. Objectives and scope of EHC Monograph
2. Comments
 - 1) Summary and recommendations
 - 2) Task Group
 - 3) Publications e.g. omitted publications
 - 4) Specifically for chapters
 - 5) Closing comments

1. OBJECTIVES AND SCOPE

Objectives of the EHC Monographs are:

"to **assess information** on the relationship between exposure to environmental pollutants and human health, and to **provide guidelines** for setting exposure limits; to **identify new or potential pollutants**; and to **identify gaps** in knowledge concerning the health effects of pollutants."¹

Furthermore, WHO "will deliver a critical, scientific review of radiofrequency fields on all studied outcomes of relevance to human health, but excluding usage for medical diagnostic and therapeutic purposes..."

The scope of this third in a series of Monographs on Electromagnetic Fields is assumed to be the same as the first two, namely:

Scope: extract²

The criteria monographs are intended to provide critical reviews on the effect on human health and the environment of chemicals and of combinations of chemicals and physical and biological agents. As such, they include and review studies that are **of direct relevance for the evaluation...** Worldwide data are used and are quoted from original studies, not from abstracts or reviews. Both published and unpublished reports are considered and it is incumbent on the authors to assess all the articles cited in the references. Preference is always given to published data. **Unpublished data are used only when relevant published data are absent** or when they are pivotal to the risk assessment. ... In the evaluation of human health risks, **sound human data**, whenever available, are preferred to animal data. Animal and *in vitro* studies provide support and are used mainly to supply evidence missing from human studies... The EHC monographs are intended to assist national and international authorities in making risk assessments and subsequent risk management decisions. **They represent a thorough evaluation of risks** and are not, in any sense, recommendations for regulation or standard setting. These latter are the exclusive purview of national and regional governments."

¹ WHO Environmental Health Criteria Programme, 1973. Emphasis added.

² 2007 EHC-ELF 238 Monograph. Emphasis added.

2. COMMENTS

1) Summary and recommendations (Chapter 1)

Note: neither a summary nor recommendations appear in the draft.

Immediate preventative actions are required.

It is clear that many well designed and scientifically sound studies from credible institutions, published in respected journals, indicate significant, potentially harmful effects at and below International exposure guidelines. It is imperative that the WHO take a leadership role and immediately move to implement the Precautionary Principle.

WHO priorities should include immediate upgrading of warnings, advisories and fact sheets (e.g. #193), to reflect accurately the findings such as cancer, sperm damage, developmental problems, etc.

Gaps in current information, and practices for data gathering include:

- International consensus and implementation of brain cancer coding regarding type and location, to enable collection of meaningful statistics that are comparable within and between jurisdictions.
- Protocols are needed to allow research use of ongoing cell phone and mobile (portable) phone usage data, while protecting privacy.
- Not all frequencies have been studied, so expansion of technologies to increasing numbers of frequencies should be accompanied with exposure tracking, to permit investigation of potential association of health effects with novel exposures.
- Means to measure exposures and discern effects of simultaneous exposures from multiple sources.

2) Task Group

Every effort should be made to establish a balanced Task Group. Details of the selection and composition of the Task Group must be made public.

3) Publications

a. Identifying relevant publications

For 2011 to 2014, I identified >1,000 more RF and EMF-RF related references than are in the Monograph draft (Table 1); undoubtedly, I did not identify all relevant papers. I used EMF portal with the appropriate YEAR and the search terms "EMF" and "radiation" to start searches. Most publications were in PubMed or World Catalog.

Table 1. Count of references identified by me (Friesen), identified by the WHO EHC-RF Monograph draft, and omitted by the WHO EHC-RF Monograph draft.

Year	References Identified		References Omitted by WHO EHC-RF Monograph draft (count)
	By Friesen (count)	By WHO EHC-RF Monograph draft (count)	
2011	379	95	284
2012	463	103	360
2013	437	38	399
2014	123*	6	117*
TOTAL	1402	242	1160

* Partial. I have over 200 references ready to add.

The WHO has an opportunity with this Monograph to correct the global shortcoming for a high quality comprehensive examination of all of the recent EMF-RF literature (Appendix A). In the meantime, an interim document with the most recent literature is urgently required so that governments, etc. can take informed appropriate precautionary and preventative actions.

The references (n=1402) identified by year for 2011, 2012, 2013, and 2014 of my searches are listed in Appendix B. Time did not permit going back to 2010 and earlier but I know there are many relevant publications that have not been included in the draft Monograph. How does WHO intend to capture these?

b. The Monograph should include a comprehensive list of "discarded" publications, with reasons

Lists should appear in the Monograph of all "discarded" publications with reasons, "duplication papers" apart from identical records identified in two databases, and those foreign language papers for which translators were not found.

Appendix X . Line 46. It was agreed to include papers in the following official WHO languages: Chinese, English, French, Russian and Spanish, while due to restricted language competence of available experts and restricted options for translations, **none of the identified Russian papers and only epidemiological Chinese papers have been included.** Papers in German were systematically included, whereas papers in other languages were **included if experts that could help with these were easily identified and available.** [Emphasis added.]

c. Inclusion criteria

The stated reasons for exclusion are too broad and it is not clear that these criteria were applied uniformly.. One of the objectives of the EHC is to identify "new or potential pollutants". To do this, a wide range of literature must be examined. The Scoping section explicitly says that even "**unpublished**" data should be examined.

Appendix X, Line 44: "in a peer-reviewed scientific journal. Narrative reviews are not included. Meta-analyses are not included at this stage. Conference proceedings are not included."

Greater inclusion, as outlined in the "Scope" section, is required, or informative data will be lost e.g. should use the highest level of evidence available as well as the inclusion of case studies e.g. West (2013): # 412, Appendix B.

d. Quality assessment of papers included in the Monograph

The Monograph must disclose its assessment criteria to the public.

If the human epidemiological research was mature, and the exposures today were the same as previously (they are not - exposures are escalating rapidly with new technologies), then non-gold standard studies might be downgraded in the synthesis of information gathering phase; however, to be forward looking, **all** evidence must be weighed and not just exclusively peer-reviewed studies.

References on the influence of funding sources should be included, such as:

- Huss, A., Egger, M., Hug, K., Huwiler-Müntener, K., & Röösli, M. (2007). Source of funding and results of studies of health effects of mobile phone use: systematic review of experimental studies. *Environmental Health Perspectives*, 115(1), 1–4.

or

- Huss, A., Egger, M., Hug, K., Huwiler-Müntener, K., & Röösli, M. (2008). Source of funding and results of studies of health effects of mobile phone use: systematic review of experimental studies. *Ciência & Saúde Coletiva*, 13(3), 1005–1012.

e. Overlooked older references

A wealth of older studies³ is available. For example:

- Kinn, J. B., & Postow, E. (1981). Index of Publications on Biological Effects of Electromagnetic Radiation 0-100 GHz. *U.S. Government Printing Office, EPA-600/9-81-011*, 567.
Extract: "This publication lists 3627 articles published in the world literature dealing with biological effects of electromagnetic radiation over the frequency range of 1-100GHz. The contents have been compiled from the data bases of the U.S. Environmental Protection Agency and the Navy Department ... to March 1980."
- declassified military documents, some of which can be found at: <http://www.magdahavas.com/category/from-zorys-archive/>

(Some of these have been translated, from the original German, Russian, etc.)

4) Comments on the topic chapters

Chapters 2 to 12 must be considered incomplete because of the omission of hundreds of publications. Some of these publications are provided in Appendix B.

Chapter 4. Biophysical mechanisms: tissue heating and add- non-thermal effects and effects at below International standards

A few of many relevant, publications include:

- Pall, M. L. (2014). Microwave electromagnetic fields act by activating voltage-gated calcium channels: why the current international safety standards do not predict biological hazard. *Recent Res. Devel. Mol. Cell. Biol.*, (7). Retrieved from <http://www.cqlpe.ca/pdf/microw-vgccnoheat.pdf>
- Nittby (2012) and Trosic (2012) - see attached reference list 2012: # 307 and # 399, respectively.
- Engels, S., Schneider, N.-L., Lefeldt, N., Hein, C. M., Zapka, M., Michalik, A., ... Mouritsen, H. (2014). Anthropogenic electromagnetic noise disrupts magnetic compass orientation in a migratory bird. *Nature*, 509(7500), 353–356.

Chapter 5. Brain physiology and function and add and Electromagnetic Hypersensitivity

The draft Monograph has omitted many publications on Electromagnetic Hypersensitivity. This section should include publications such as:

- McCarty, D. E., Carrubba, S., Chesson, A. L., Frilot, C., Gonzalez-Toledo, E., & Marino, A. A. (2011). Electromagnetic hypersensitivity: evidence for a novel neurological syndrome. *The International Journal of Neuroscience*, 121(12), 670–676.

(Note: there is an exchange of "letters" between one of the authors and Dr. G.J.Rubin.)

Here is a prime example where "unpublished" data should be listed and examined for this emerging public health issue. In addition, clinicians and researchers in the field e.g. medical doctors such as Dr. Belpomme (France) and Dr. Bray (Canada) should be interviewed. (I would be glad to provide more names.)

³ Not in WHO EHC 16 (1981/1982) or WHO EHC 137 (1993)

Chapter 11: Fertility, reproduction and development

Findings in this study must be considered:

- Su, X.-J., Yuan, W., Tan, H., Liu, X.-Y., Li, D., Li, D.-K., ... Miao, M.-H. (2014). Correlation between exposure to magnetic fields and embryonic development in the first trimester. *PLoS One*, 9(6), e101050. doi:10.1371/journal.pone.0101050

Chapter 12. Cancer

This recent publication must be considered:

- Carlberg, M., & Hardell, L. (2014). Decreased survival of glioma patients with astrocytoma grade IV (glioblastoma multiforme) associated with long-term use of mobile and cordless phones. *International Journal of Environmental Research and Public Health*, 11(10), 10790–10805. doi:10.3390/ijerph111010790

Note: The Danish cohort studies have been largely discredited and should at best be given a low weighting e.g. *BMJ* comments and commentaries in other publications such as Soderqvist (2012): # 371. How could a personal phone "subscription" possibly serve as a "gold-standard" exposed group, while those with corporate subscriptions are considered unexposed? Exposure in the mid-1990s cannot predict exposures over 10 years later. More comments can be found on the *BMJ* website. Surely, if the website containing the Trottier and Kofsky (2009) comment, can be used as a basis to exclude a study (Havas heart study), then the *BMJ* comments and related peer-reviewed publications should have equal or greater merit e.g. comments by Dr. Henshaw (Emeritus Professor of Human Radiation Effects, School of Chemistry, University of Bristol Cantocks Close, Bristol).

It is of interest to note that the Trottier and Kofsky (2009) comment was accessed in February, 2014 (see Chapter 9, page 46), yet peer reviewed, relevant publications which would have been available at this time, were not identified for inclusion. Some would consider this more than a hint of bias.

Closing Statement: There should be another opportunity for public examination and response to a complete draft Monograph.

Please contact me for clarification or for assistance in identifying the omitted documents, particularly from 2010 and earlier, as well as the most recent 2014 and 2015 publications.

Appendix B: Relevant references identified for 2011, 2012, 2013 and 2014 (n=1402) for World Health Organization (WHO) public consultation on the Electromagnetic Fields (EMF) Radio Frequency Fields: Environmental Health Criteria (EHC-RF) Draft Monograph (n=242).

Many are studies showing biological effects at below International guidelines; some show effects attributable to non-thermal mechanisms. The total list (n=1402) includes a partial listing of Low Frequency, Pulsed EMF and MRI publications which may have relevant findings or comments.

At the end of some references, in { }, is the chapter(s) where the reference/study was cited in WHO's draft. Also listed is whether the cited study was not considered in the WHO's draft evaluation/analyses/summary tables. If listed but not being considered by WHO, the page number where this is noted in the WHO's draft is given.

Publications showing no effects, potentially harmful effects, and potentially therapeutic effects are included.

Note: order and format may not be the same as in the WHO draft.
